

and be very gushing, as, for instance, on meeting an acquaintance in the street.

An obvious cause for blushing is over-sensitiveness and self-consciousness, which will wear away as the person becomes used to society and strengthens his character by adopting wise principles of thought and action. The physiological explanation of blushing given by the writer just quoted is that it is due to paralysis of the sympathetic circles of nerves surrounding the arteries which, not contracting properly,

**TERRORS OF APPENDICITIS.**

supposed to be the Cause of About All Cases of Peritonitis.

"The prevalence or supposed prevalence of appendicitis nowadays," said Dr. Edward J. Howell, of New York, "is simply due to the fact that the process is now known to be the cause of nearly all the cases of inflammation of the bowels, or peritonitis, as it is called. In this disease, as in the case of peritonitis, in the male at least, that is not caused by inflammation of the appendix. What happens when the appendix is inflamed is that the inflammation or solid pieces of feces get engaged in the little body that is situated at the end of the bowels, the appendix, and the bowels. This interferes with the circulation of blood in the bowels, and the

tion, the little body swells, ulcerates, and some of the contents of the intestinal canal get outside through the skin, forming an abscess. The results are usually innocuous, and if the abscess becomes commonly or generalized the patient's chances of recovery are good, either by an operation or the abscess making its way to the surface and discharging its contents into the bowel, and he gets well without any operation beyond, perhaps, opening the abscess.

Frequently the abscess becomes difficult and broad, and the patient's activity is so limited almost invariably to bed. These latter cases can only be saved by an early operation. The point on which the public should be informed is that the early symptoms of tramps, or the signs of a bad customer, should always be regarded seriously. Appendicitis is essentially a surgical disease, amenable to surgical treatment

Only the hunter appreciates how careful one must be with a finely bred hunter. Yet

Some men seem to regard the law as a mere hindrance to their desire for sporting purposes, and exact an amount of violent exercise which tells upon them exactly as it does upon ours. A dog who comes home overtired, unharmed supplied with tempting food, and a warm, clean and comfortable bed, would break down as certainly as a man would. All hunting men know this about their horses and all grizzled and staid men are accordingly. But about their dogs men seem to reason as if they were gifted by nature with some special exemption from all the consequences of insalubrity.

There are fools in the world who think

[illegible]

whose care he had been specially intrusted that he was unable to do him any disservice. Three days' running after a hard day's work, he had had nothing but a few minutes' rest, and he was so exhausted that he was quite unable to stand out against the cold and wet, enquired if he could not be taken home, and had we gone on leaving him to serve as a violent chill, and would certainly have proved fatal. I was very sorry to hear of his death, but that was a lesson to us, and we hope it may be a lesson to others. I am glad to hear that you are in good luck with them to friends' houses.

Another dangerous thing to do with fellows is to let them know that you are a friend, when they are wringing wet. It is a very dangerous thing to do, and I would always be possible to give them a good thrashing down before putting them in the dogcart.

**STIFF PRICES.**

Cleveland Plain Dealer: "Why do you call this a 'disolution sale'?"

Answer: "Because it is a dead give away."

# OVARINE

(Hammond.)

---

The emotions in women are largely influenced by the ovaries, and the ovaries

are in turn decidedly influenced by the emotions. Professor Skene, one of the distinguished authorities on Diseases of Women, writes: "The passions, anger, and even great joy are capable of arresting menstruation."

"In order to maintain harmonious action of the whole organization "it is necessary that the system shall exist in full development and functional activity. On the other hand, these "organs, which are essential to the well-being of the individual, must, when "they are subjected to influence in "deranging the brain and nervous system."

These facts go to prove conclusively that a very large proportion of the cases of insanity in women could have been prevented by early treatment of the ovaries. It is also very probable that many cases of insanity could be perfectly cured by careful and systematic treatment

THE  
**Animal Extracts**  
Professor *William A. Hammond* has  
made the following statement:

The use of *Ovarine* is of great value in

It is to be recommended in—

1. Congestion of the ovaries.
2. Chronic inflammation of the ovaries (oophoritis).

3. Imperfect development of the ovaries.
4. Neuralgia of the ovaries.
5. Amenorrhoea, caused by ovarian derangements.
6. Chlorosis.
7. Hysteria.
8. Nervous prostration (Neurasthenia).

9. Sterility.  
10. Irritability.  
11. Morbid appetite.  
The uniform dose is 5 drops (minims)  
two or three times daily dropped upon  
the tongue.
